Summary

Results-driven Full-Stack Developer skilled in MERN Stack, Next.js, and AI-powered applications, with experience building scalable REST APIs, real-time systems, and production-ready web platforms.

Experience

Arupa AI | Backend Developer Intern | Remote Mar 2026 – May 2026

- Built scalable backend services using **NestJS** and developed RESTful APIs for AI-powered applications.
- Integrated real-time AI APIs and asynchronous workflows to improve response speed and system reliability.
- Implemented secure authentication using **JWT**, **OAuth 2.0**, and **Google Calendar** integration for scheduling features.

SkyAim Digitech | MERN Stack Developer Intern | Remote Dec 2025 – Feb 2026

- Developed and deployed an end-to-end student community and resource management platform using the **MERN stack**.
- Built RESTful APIs, authentication systems, CRUD operations, and real-time features to support seamless user engagement.
- Deployed and maintained the application on a **VPS**, ensuring reliable production performance and scalability.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Python
Frontend: HTML, CSS, React.js, Next.js, Tailwind CSS, WebSockets (Socket.IO), Zustand
Backend: Node.js, Express.js, REST APIs, Authentication (NextAuth, JWT), CI/CD
Databases/Tools: MongoDB, PostgreSQL, Redis, Docker, Git, AWS(EC2)

Projects

ImageShell - Image Hosting Platform

- Developed a secure, scalable image hosting platform using **Next.js** and **TypeScript**; backend persisted in **MongoDB**.
- Implemented **NextAuth** authentication and integrated **Razorpay** for subscription payments (payment flows, webhooks, verification).
- Designed and exposed RESTful **CRUD APIs** with role-based access control (RBAC) and input validation to support admin and user workflows.
- Optimized frontend and delivery pipeline, reducing image load times by **70%** using **ImageKit** for CDN-based real-time transformations and lazy loading.

Online Interview Platform

- Engineered a real-time video conferencing platform using **WebRTC (Web Real-Time Communication)** for peer-to-peer media, with chat, screen sharing, and session recording.
- Integrated **Clerk** authentication and implemented JWT-based session handling and role-based permissions for interviewers and candidates.
- Leveraged **Stream API** for scalable messaging and presence; implemented signaling and reconnection strategies to maintain low-latency streams.

AutoClaw - Multi-Channel AI Agent Platform

- Built a multi-channel AI agent platform using **TypeScript**, **Bun**, and **OpenRouter**, supporting CLI and Telegram for AI-driven task execution.
- Developed **Agent**, **Plan**, and **Ask** modes with **ToolLoopAgent** orchestration and **Firecrawl** integration, enabling autonomous workflows with retry mechanisms and 40-step execution limits.
- Implemented request batching and local caching strategies, reducing median agent response latency by approximately **5x** (**900ms** → **150ms**) and improving overall system responsiveness.

Education

Government Engineering College (GTU) Patan
Bachelor of Engineering in Computer Science *Jun 2024 - Present*

R.C. Technical Institute (GTU) Ahmedabad
Diploma in Information Technology (CGPA: 7.65) *Jun 2021 - May 2024*
